Wendover Air Force Base ,
Heating Facility Building (also
(Base Power Plant)
(Building No. 2628)
HABS No. UT-125-~~WVV~~ BV
Page 1

Situated at the end of its own short driveway south of D Street (old X Street), the building housed the mechanical system which provided heat some of the buildings in the Hospital Complex. A tall, one-story structure, it was built in 1943 at a cost of \$9,733.70. It is of "Mobilization," Semi-Permanent" construction.

Measuring 46 feet-5 inches by 60 feet-8 inches with a 19-foot-by-56-feet-2 inch offset, this building encloses 3,969 square feet of floor space. It has a concrete slab foundation/floor, a wood frame superstructure and a gabled roof covered with composition shingles. The exterior sheathing is horizontal wood siding. Because of the scarcity of windows and the large, metal roof vents, the building has somewhat the appearance of an old flour mill. There are a pair of 2/2 windows in the south wall and three of the same windows in the west wall. The offset is actually an open shed lean to running nearly the full length of the north wall. Above its roof are four pairs of 2-pane windows.

The interior contains a "Hienie" steam boiler, a "Fitzgibbons" steam boiler, two large water tanks, pumps and related mechanical equipment, plus a restroom and shower as well as a fire detection system. The heating plant was operational until recent years. The building seems to be in good structural condition.
